New User without Account

Returning User already has an Account

User In the chatrooms

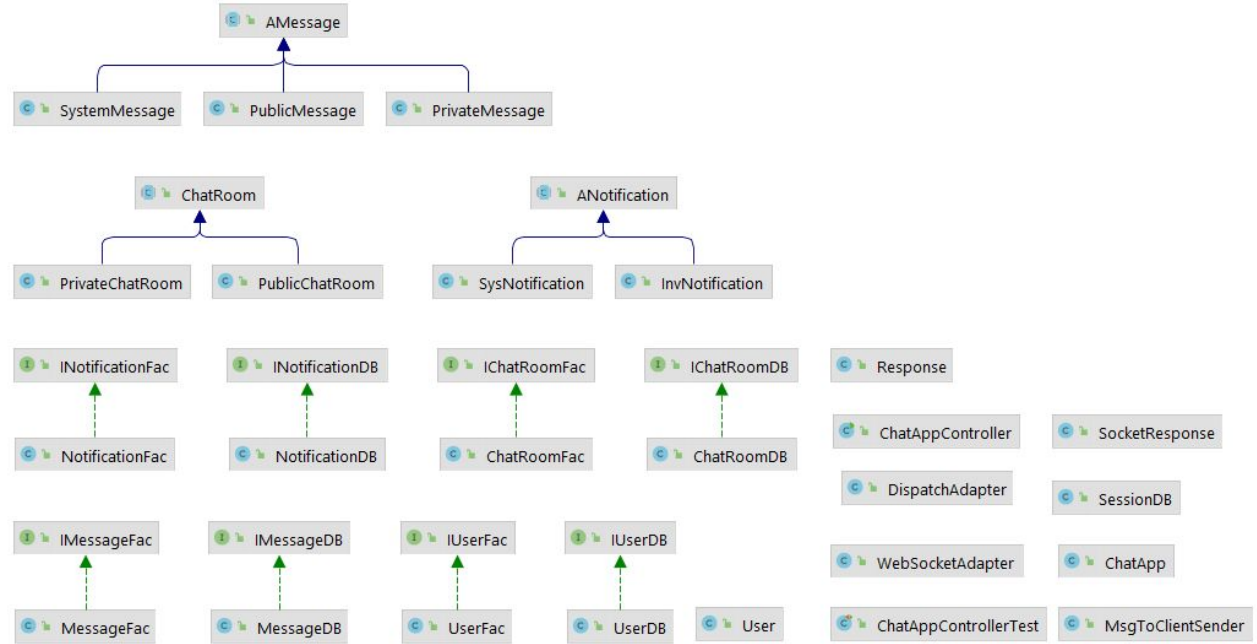

Our Design Decision

1. User who creates the room is the admin
2. Admin can delete any public messages, user can only delete their own messages.
3. User can only edit their own messages.
4. "Hate speech" will convert to ***** in front end.
5. If the user type "hate speech" 5 times, the user will get warning. If the user type 10 times, the user will not be able to log in
6. User can select avatar from existing list
